Please select Draft cleanup option "G" with amendments to add the goal of the cleanup as the end the of the Fish Consumption Advisory for all individuals, including breast feeding women, related to pollutants found in the Portland Harbor, and to provide a date by which the advisory will be lifted.

The EPA's plan removes far too little contaminated sediment from the river.

It should require removing at least 1000 acres of polluted sediment. The EPA's plan prescribes far too much "Monitored Natural Recovery." This leaves far too much polluted material in the river.

Liability for the PCBs, PAH, DDT and other toxic and persistent pollutants in the river sediments, must not be dismissed. Liability must be enforced by requiring a comprehensive and timely cleanup.

The Willamette River in Portland belongs to the people of Portland. It is not the property of the organizations currently holding the liability for its contamination. The EPA must not enable those liability holders to deny our river to us!
